

A motion approved to design the breeder referral page in such a way that all breeders are listed on ONE webpage by breeder kennel name (alpha) within State (alpha) that the breeder resides in. The breeder information should be the same information that is currently provided (no more, no less) but should be displayed in such a way, that we maximize the use of the space on the webpage to "minimize" the need to scroll to see all breeders. This should be accomplished by designing the webpage to have 2 or 3 columns across the page and arrange the breeders in a top down, left to right, then across to next column format. The number of breeders would be evenly distributed across the columns except in the case that starting in the next column would cause a split in the breeders within the same state.
